Taxodium distichum

SWAMP CYPRESS

This is a deciduous conifer with soft, fine-textured, needle-like bright green foliage changing to a rusty orange in late autumn then brown before falling. Deeply fissured reddish brown bark. It has small resinous, round, purple cones.

Its fine feathery foliage makes this a beautiful specimen tree. As a young tree it is partly conical in shape, becoming more spread out when mature. The bright green foliage in spring and summer provide interesting contrast in the landscape.

Is tolerant of most soil types although it prefers moist over dry.

Foliage	Deciduous
Form	Horizontal Branching
Mature Size	20 x 6m
Family	Cupressaceae

Giant **Deciduous** **Horizontal Branching** **Feature Foliage** **Shade Tree** **Specimen**
