Balance bold colour with these cool natives

Break up that green palette and be captivated by our Australian natives. Incorporate some of the cool blues and icy greens of our native trees which provide unique, year round beauty.

Eucalyptus cladocalyx nana

DWARF SUGAR GUM TREE

This Australian native is a medium sized tree, usually multi stemmed, stout and solid in its growth habit. It is a much smaller growing tree than regular E. cladocalyx. It has yellow and blue-grey coloured bark with a mottled appearance. The foliage is a glossy dark green on top with paler undersides. During the warmer months, yellow flowers are produced, followed by large gumnuts.

Eucalyptus polyanthemos

RED BOX TREE

This Australian native tree grows naturally down the central tablelands of New South Wales to Victoria, and across as far as Ararat. A tough tree, it is capable of tolerating difficult, dry stony soils. Juvenile foliage is oval in shape and grey-green in colour whilst the mature, adult leaves are more ovate. The short trunk can be smooth or box-like (fissured). Flowering occurs from September to January during which small white flowers appear.

Corymbia citriodora 'Scentuous' (syn. 'Dwarf Pink')

'SCENTUOUS' DWARF LEMON-SCENTED GUM TREE

This is a slightly narrow-domed Corymbia (syn. Eucalyptus), developed by Speciality Trees, doesn't shed its branches. It has a smooth trunk that may be slightly mottled. The bark is a pinky-salmon in colour. Leaves are narrow and highly aromatic when crushed smelling strongly of lemon. This tree features lovely cream-coloured flowers in summer.

Waterhousea floribunda 'ST1' Whisper (syn. Syzygium)

WHISPER WEEPING LILLY PILLY TREE

Unique to Speciality Trees and our best-selling tree! This is a versatile, bushy tree with a wonderful weeping habit, making it perfect for large screening projects and the softening of fence lines. Unlike other Waterhousea, it is propagated from Victorian mother-stock, so responds better to all weather conditions, including cooler climates. New growth starts off pink and orange with leaves turning to various shades of green as the foliage matures.

Angophora costata

SMOOTH-BARKED APPLE MYRTLE TREE, RUSTY GUM TREE

This attractive Australian native Angophora (syn. Eucalyptus) is loved for its smooth bark that is slightly purple in colour. It has large and twisted limbs and a very large expanded trunk base. It bears white flower clusters in spring. This tree has opposite leaves compared to alternate leaves as seen in eucalypt tree varieties. It has beautiful red new growth.

Lophostemon confertus

QUEENSLAND BRUSH BOX (TREE)

A rainforest tree native to the North-Eastern parts of Australia, this is a fast growing tree which is rarely affected by pests and diseases. Dome-like in shape, it develops a very dense foliage cover of dark green, leathery leaves providing good shade for the summer months. This variety rarely sheds limbs and has salmon coloured bark which flakes off over summer revealing orange-brown tones on the trunk. Summer also brings clusters of small white flowers whose stamens give them a decorative fluffy appearance.
