

Bird-attracting Trees

Due to their bushy structure, leaf density and flowering capabilities, many Australian natives are great options when planting for increased birdlife.

Brachychiton populneus x acerifolius 'Jerilderie Red' **JERILDERIE RED BRACHYCHITON**

This is an attractive densely canopied tree that produces densely packed powdery-red flowers that are shaped like small bells during the summer months. This is a stunning native tree that is bird, butterfly and insect attracting.

Eucalyptus leucoxylon rosea **RED-FLOWERING YELLOW GUM**

This tree has a smooth trunk with cream to grey coloured bark which sheds in flakes. It has narrow shaped green leaves and as it matures, forms a large open canopy. From Autumn to Spring, an abundance of red flowers appear in clusters of three attracting a variety of birdlife.

Brachychiton populneus x acerifolius 'Bella Pink' **BELLA PINK BRACHYCHITON**

This is a small to medium sized shade tree offering glossy green foliage and pretty clusters of salmon pink, bell-shaped flowers in Summer. As a grafted tree, it is more compact in size which makes it highly suitable for domestic landscapes. Flowers are bird attracting.

Corymbia citriodora

LEMON-SCENTED GUM

A beautiful, tall growing Corymbia (syn. Eucalyptus) with a distinctive, often powdery white to grey coloured bark which curls and flakes off in spring. Its leaves are green, long and slender with an amazing, strong lemon fragrance when crushed. Its strong scent is a distinguishing attribute, with the essential oils produced from this variety often being used in fragrances as well as insect repellents. In summer and autumn, feathery white flowers appear, making it a good source of food for honey bees.

Eucalyptus leucoxyton megalocarpa

LARGE-FRUITED YELLOW GUM

This Australian native tree is small to medium in height with a compact, spreading habit. Technically this is a more compact growing form of the regular Yellow Gum Eucalyptus but produces bigger flowers. It has a nice spreading habit with beautiful olive-grey spear-shaped foliage. Similar to 'Rosea', it produces large pink-red, bird attracting flowers from late winter to spring and grows to a similar height with a good canopy.

Leptospermum obovatum 'Starry Night'

STARRY NIGHT TEA TREE

A versatile, fast growing shrub with fine, deep purple foliage forming a graceful, weeping habit with its purple-pink new growth. In late spring and summer, bronze buds open to a profusion of long-lasting snowy white flowers. A great Australian native adaptable to a variety of soil types and conditions and can be used as a screen, hedge or specimen plant.

Callistemon citrinus 'Kings Park Special'

KINGS PARK BOTTLEBRUSH

This native shrub or small tree is very hardy and adaptable to a wide range of locations and soils. It is generally trouble-free, growing to about 4m high and 2m across. The flowers appear as beautiful crimson spikes which are borne in spring and summer. Requiring little to no maintenance, this variety flowers over a lengthy period and the slender, green foliage forms a neat, rounded appearance.
