

## Acacia cognata

### NARROW-LEAF BOWER WATTLE

A fast growing native to south-eastern Australia, this is an attractive wattle with pendulous branches and beautiful weeping habit. Grows to the size of a large shrub or small tree depending on your landscape and climate. Fluffy yellow, ball shaped flowers are produced in spring.

As a small feature tree it looks great mass planted in the open or under the shade of bigger, taller trees. A good option for soft screening. Looks great combined with bold foliage and with other plants lime, silver or burgundy in colour.

Prefers moist situations and can grow very well in dappled shade. Can tolerate most soil types including sandy loam and clay. Drought and frost tolerant.

**Foliage** Evergreen

**Form** Shrub

**Mature Size** 6-8 x 6m

**Family** Mimosaceae

**Evergreen**
