

Banksia ericifolia x spinulosa 'Giant Candles'

This is a species of woody shrub, widely used as an understorey plant. It generally grows as a small shrub with long narrow leaves. Flower colour varies between brown, red, orange and gold. Offers a long flowering period from autumn through the winter to spring when the three stages of cone development can be observed - bud, flower spike and seed capsule.

A great shrub for underplanting. Dense dark green foliage provides an attractive backdrop to the showy flower spikes.

This shrub grows well in most soils but prefers good moisture and drainage. Full sun position or part shade.
