

Banksia integrifolia

COASTAL BANKSIA

This distinctive native tree is found on the east coast of Australia. It has rough patterned bark and long green leaves with a silver underside. Pale yellow, cylinder-shaped flowers can be seen in summer to winter and can be up to 12cm long. The seed pods stay on the branch for long periods and look very ornamental.

This is an attractive feature tree. Great for coastal planting but can also work in urban settings as it is tolerant of most growing conditions. Can be pruned.

Will withstand most soil types including heavy clay and sandy soils. A good option for a windbreak in coastal areas.
