| Tree |  <p>Prunus armeniaca 'Newcastle' NEWCASTLE APRICOT (LOW-CHILL)</p> |
| Description | Newcastle produces a rounded, medium to large yellow-orange fruit with light green shoulders. Its flesh is orange, soft and juicy. It is an early harvest, free-stone variety that is self-fertile. Newcastle successfully produces fruit in both cool-temperate, warm-temperate and some subtropical climates, as it requires low chill hours. |
| Foliage |  Deciduous |
| Form |  V-Shaped |
| Mature Size | 5 x 3m |
| Uses | This variety produces a small yellow fruit used for drying, desserts, preserves and canning. |
| Position & Soil | Prefers a sunny position with well-drained soil. Water in well and keep soil moist until tree is established. Fertilise and prune yearly to encourage new growth and fruit the following year (this heavy-bearing tree may need thinning each year to ensure a good yield). |
