

Corymbia eximia

YELLOW BLOODWOOD

This Australian native Corymbia (syn. Eucalyptus) has scaly yellow-brown bark. The leaves are broad, thick, curved and blue-green in colour. It produces large creamy flowers in spring that are in clusters of up to seven. The flowers attract birds and insects in spring.

A great feature medium-sized tree for large gardens. Can also be used in streetscapes and parks. Great for habitat for native fauna.

Suits dry conditions once established. Will tolerate most soils in full sun position. Does not tolerate frost well. Leaves will turn a yellow green in winter but as the weather heats up the colour will change quickly.
