

Eucalyptus leucoxylon megalocarpa rosea

ALSO KNOWN AS EUCALYPTUS LEUCOXYLON MEGALOCARPA

Technically this is a more compact growing form of straight Yellow Gum Eucalyptus that produces bigger red flowers. It has a nice spreading habit, creates good canopy with beautiful olive-grey foliage.

This tree makes for a lovely specimen tree in parks and gardens. It creates a robust habitat for birds and insects and delivers great colour in the garden for the majority of the year.

This species loves full sun and a well-drained position. Prefers drier areas but can tolerate wet climates. Handles frost and dislikes humid conditions.

Foliage Evergreen

Form Oval

Mature Size 8 x 6m

Family Myrtaceae

Small
