

Eucalyptus pauciflora

Foliage Evergreen
Form Pendulous
Mature Size 12 x 5-7m
Family Myrtaceae

SNOW GUM

This is a hardy Eucalypt commonly found in subalpine areas across the eastern regions of Australia. Young branches are glossy and red and as the tree matures, it develops smooth bark ranging in colour from green to grey and cream. Often, the trunk and branches will develop a crooked, twisted appearance. Leaves are large, glossy, thick and waxy and white flowers appear during the warmer months, followed by large gumnuts.

An excellent street tree and in parks and gardens. Often seen in snow-prone areas. Great in medium to large gardens with its bark being a major feature of the tree. The growth habit is usually determined by the location it is grown in. In high mountain ranges, this variety will grow quite stout, whereas on the coast it will develop into a taller, more upright tree.

Will tolerate a large range of weather conditions from very cold to very hot can tolerate periods of drought and very wet areas but does need good drainage.
