

Juglans nigra

BLACK WALNUT

This is a tree originally from North America featuring dark-coloured timber and bark with edible seeds. The nuts are harder to extract than those of the more common *Juglans regia* which is the common walnut variety. Black Walnut is highly valued for its wood, being used extensively for furniture and in other industries such as shipbuilding.

This is a large specimen tree and a great selection for larger gardens. Makes a lovely shade tree.

Black walnut is usually found in deep, well-drained moist soils. The tree requires abundant sun and is not tolerant to root disturbance or shade.
