

Lagerstroemia indica x fauriei 'Biloxi'

CREPE MYRTLE (PINK)

This tree is best for its beautiful pink flowers which have a crinkle-like effect and are borne in clusters in late summer. The leaves are dark green but turn orange before shedding in late-autumn. We grow this tree with a single trunk. This tree is a larger-growing variety than the closest pink variety - 'Sioux'

A great feature tree for home gardens. Seasonal beauty with smooth winter limbs and summer flower bracts. With good autumn colour and long summer flowering, this variety makes a great specimen tree for the small garden or landscape. Works well in streetscapes and is a clever choice for space-limited landscapes. Relatively-hardy, this variety is resistant to powdery mildew and will tolerate periods of dryness once established.

Prefers humus rich, well drained soils, in full sun.
