

Lagerstroemia indica x fauriei 'Natchez'

CREPE MYRTLE (WHITE)

This small, deciduous tree creates great interest throughout the year. In summer, clusters of spectacular white, crepe-paper like flowers are produced. Following this, the dark green leaves add further interest as they transition into autumn, turning a rich bronze-red colour before falling. Bark also provides colour as the tree matures, with its flakiness revealing the rich, brown underbark.

A fantastic feature tree both in autumn and spring. It can be used in streetscape, parks and gardens of any size. A clever choice for space-limited landscapes. Seasonal beauty with smooth winter limbs and summer flower bracts. A beautiful growth habit and resistant to mildew, this variety will tolerate periods of dryness once established.

Prefers a well-drained humus rich soil in a full sun position. Can tolerate most conditions but moisture is preferred in dry periods when young.
