

Prunus avium 'Lapins'

LAPINS CHERRY

This is a late maturing cherry, the heavy crops of dark red to mahogany fruit appearing late in the season. Lapins are self-fertile, however they produce better from cross-pollination with another cherry tree of the same or a different variety, such as 'Stella' Cherry.

This is an excellent choice for backyards as it is a compact grower to approximately 4m tall. Late season maturity. Good for eating fresh and for jams.

it is suitable for growing in warm temperate and cool temperate regions.
