

Prunus serrulata 'Shirotae' syn. 'Mt Fuji' (Tree Form)

MT FUJI ORNAMENTAL CHERRY (TREE FORM)

A very popular feature tree for small gardens. This deciduous, ornamental cherry develops a spreading flat crown with branches that droop down slightly. A beautiful display of pure white, semi double blossoms cover the tree in early to mid-spring, followed by finely serrated, pale green leaves which darken to mid green over the warmer months. Autumn brings another display of colour with foliage turning shades of orange and red. A beautiful specimen tree throughout the seasons.

Due to its form and flowering ability, this tree makes an eye-catching feature tree in gardens requiring a wider growing tree.

This tree prefers a full sun to part shade position and a moist, well drained, fertile soil. However, it is adaptable to a wide range of conditions.
