Styrax japonica 'Emerald Pagoda'

Foliage	Deciduous
Form	Horizontal Branching
Mature Size	8m x 6m
Family	Styracaceae

JAPANESE SNOWBELL TREE

Considered the most distinctive flowering of all Styrax japonicus selections, it produces an abundance of star-like flowers that are slightly fragrant. These flowers carpet the ground. It has large dark green leaves which are leathery in texture and turn yellow in autumn. The flowers attract an abundance of bees to the garden.

A very pretty small growing tree, it will grow as an understory tree or make a striking specimen in an open situation.

Copes well in full sun or part shade. While it prefers a well-drained soil, it is tolerant to most soil types. The ideal planting location is where the tree is able to receive a couple of hours of shade each day and in a protected environment from wind and harsh sun. It is recommended to thin out dead and weak branches yearly to keep it looking its best.
